

Keeping an eye on your fleet

Are you constantly worried about your fleet of vehicles which move across South Africa and the rest of the continent? Where the vehicles are currently, are they en-route to the delivery points or are they stationary, and even more importantly is your driver safe?

The Skygistics product line and brand is proving to be extremely valuable to the transport and asset management environment, offering a real-time tracking, monitoring and communication solution available via satellite and GSM throughout Africa, Australia and the Middle East, twenty four hours a day, seven days a week.

“Our product line has enabled fleet operators to streamline their fleet management by centralizing information on their vehicles into our system. Our new software allows users not only to keep all their vehicle data such as type, registration number and odometer readings on one data base, but also allows the users to track where a vehicle is at any stage, be it stationary or moving,” says Andre Naude, Head of Sales and Marketing South Africa.

“Our core focus is empowering our clients and allowing them to transform their business by using the information that our systems provide in such a manner that both increases efficiency and decreases operational costs” he explains.

The Skygistics system allows a fleet manager to access information by vehicle via the internet, receive automatic alarm notifications via cell phone and even communicate with a driver via text through a dedicated Satellite Network. Remote vehicles can be monitored on a regular basis through reports on vehicle status via the internet.

Information available to the user includes current and historic data in chart and graph form, speed, temperature and location displaying co-ordinates of the vehicle. Through Skygistics' strategic alliance with MapIT, information is now also displayed on both Google Earth and street level maps.

Skygistics constantly seeks to examine all aspects of the service experience in finding ways to improve its customer satisfaction. “Our objective is simple we find ways of providing solutions that cater to your needs” says Neil Hattingh CFO at Skygistics.

“Skygistics' competitive edge most definitely lies in the vision of our Dealer Partners, who are appointed selectively and exclusively. Skygistics Dealer Partners understand that the solution that they provide to their client does not just consist of a courtesy call - it encompasses a TOTAL solution. The end result is a satisfied client, who appoints a business partner for life,” explains Myrtle Du Preez, Business Development Executive at Skygistics.

The Skygistics products are VESA (Vehicle Security Association of South Africa), DO160 Aviation and ICASA approved. The products have also been accredited by SpoorNet and have received coveted Defense Force Data Communications Service Provider Accreditation.
