

CREATING COST SAVING SOLUTIONS FOR GAS AND OIL MONITORING AND CONTROL

Strategy and the ability to adapt to changing market conditions have long been the key factors to success in the oil and petroleum industry. Resources and equipment is often spread over vast geographic areas, and one of the key challenges companies in this sector have faced, has been the monitoring and control of these assets.

Skygistics' range of products have been developed to assist oil and gas companies with managing this process, by ensuring that relevant information about temperatures, pressures and other variables are managed remotely.

"The cost of visiting sites or in some cases manning sites to monitor information can be staggering. With the Skygistics range of products, oil and gas companies can now access information to manage their pipelines and systems via the internet," says Frik van Staden COO- Skygistics.

"Our core focus is empowering our clients and allowing them to transform their business by using the information that our systems provide in such a manner that both increases efficiency and decreases operational costs" he explains.

With the innovative solutions available from Skygistics users are able to view information and operate systems from any location across Africa. The system automatically sends an alarm to key staff notifying them of possible gas leaks and changes in gas flow, via a cell phone.

The Skygistics products are reliable in any weather condition due to the use of geostationary satellite technology and rugged, low power transceivers. "The system has been developed in such a way that it is completely customizable by the user. The frequency of reporting and other parameters can be changed via the internet," he says.

“Skygistics’ competitive edge most definitely lies in the vision of our Dealer Partners, who are appointed selectively and exclusively. Skygistics Dealer Partners understand that the solution that they provide to their client does not just consist of a courtesy call - it encompasses a TOTAL solution. The end result is a satisfied client, who appoints a business partner for life,” explains Myrtle Du Preez, Business Development Executive at Skygistics.

More information about the Skygistics products and solutions is available from www.skygistics.com or by contacting the head office on (012) 682-1600.
